Lower Manhattan's eight zip codes are the site of 402 confirmed cases of coronavirus, up from 309 cases on April 2, which represents an increase of approximately 30 percent.

According to the DOH data, the mortality rate for COVID-19 is approximately 3.5 percent. This updated tally for confirmed cases of coronavirus indicates that the total number of local residents known to be infected has jumped by approximately 30 percent since April 2, when the total number of Lower Manhattan cases was 309 patients. This does not necessarily mean that the local rate of infection is growing at 30 percent per week, but may be a reflection of more patients being tested.
